WINDOWS & DOORS

"Thank-you! We love our windows and the great service we received."

- Brent and Sherra Collett, *Duncan* | BC

BEAUTIFUL & PRACTICAL

Whether you are renovating your existing home or building the house of your dreams, Thermoproof windows and patio doors offer both beauty and practicality. Backed by a lifetime warranty, our products are energy efficient, attractive and low maintenance.

Thermoproof Manufacturing has been making windows and patio doors on Vancouver Island since 1977. We only use high-quality vinyl that resists fading, chipping or peeling.

Our non-corrosive hardware has been designed to withstand the driving rain and salt air that is part of Island life, but which can be so hard on your home's exterior.

With a wide selection of styles, sizes, and colours to choose from, our complete line of Thermoproof products gives you the freedom to decide what works best for your specific needs.

OUR LIFETIME WARRANTY

When you purchase Thermoproof windows or patio doors, you're also purchasing peace of mind. We warranty our products for as long as you live in your home. And, if you sell your home, our warranty is fully transferrable and becomes a 15-year warranty from the original purchase date. This includes the glass, parts and labour, even the screen.

We know that rain and salt air are a part of life here on the Island and design our products with the elements in mind. We don't exclude or reduce the period of the warranty if you live near the ocean.

Now, if your cat objects to being kept inside and makes an escape through the screen, well, we prefer not to get involved in domestic disputes.

WHY SHOULD YOU CHOOSE THERMOPROOF?

WE PROVIDE ONE OF THE BEST WARRANTIES AVAILABLE

WE OFFER ENERGY STAR® QUALIFIED PRODUCTS MADE WITH LOW-E GLASS* FOR EXCEPTIONAL ENERGY EFFICIENCY.

OUR PRODUCTS ARE EXTREMELY LOW MAINTENANCE.

OUR PRODUCTS MEET THE HIGHEST PRODUCTION STANDARDS.

WE ARE THE LARGEST WINDOW AND PATIO DOOR MANUFACTURER OWNED AND OPERATED ON VANCOUVER ISLAND, WITH AN EXTENSIVE RANGE OF PRODUCTS TO MEET YOUR NEEDS.

ENERGY EFFICIENCY

Windows provide beautiful views and wonder natural light, but inefficient windows can contribute up to 30% of the energy consumed in your home. Our Thermoproof windows will increase your comfort while decreasing your energy costs. You can

sleep better at night knowing that by improving your home's energy efficiency, not only are you saving money, you are also reducing greenhouse gas emissions that contribute to climate change.

*WHAT IS LOW-E GLASS?

Low-E glass is a special neutral-colored high performance coated glass that helps reduce heat transference. By using products built with Low-E glass, you can significantly reduce the heating and air conditioning costs of your home.

Low-E glass is designed to provide you with year-round savings and comfort by optimizing both the sun's heat and your home's heating and cooling systems. In the summer, it keeps your home cool and comfortable by blocking the sun's heat. In the winter, it helps you stay warm and cozy by retaining your home's interior heat. And, since Low-E glass blocks most of the sun's damaging ultraviolet rays, it will also help your curtains, carpets, furniture and wall coverings stay beautiful for years to come.

Decrease the HEAT LOSS from inside your home during the cold weather.

Decrease the HEAT GAIN from outside your home during the warm/hot weather.

THERMOPROOF SLIDING WINDOWS

Sliding windows are a popular choice for many customers because of their value, ease of operation, and durability. Designed for extra strength and energy efficiency, Thermoproof Vinyl Sliders give you the most window for your investment. You can open your slider without taking up any exterior or interior space, and the design easily accommodates building code bedroom egress requirements.

THERMOPROOF CASEMENT/AWNING WINDOWS

An excellent investment for your home, Casement and Awning windows are hinged and open wide like a door and offer some advantages over the slider. They are a better choice if high energy efficiency is your goal. The screen is on the inside of the window, protecting it from the elements when not in use and the casement design also offers more trim and hardware options.

Folding crank handle with stow away latch

Cam handle with wicket screen

ALL QUOTES FOR THERMOPROOF WINDOWS AND PATIO DOORS INCLUDE SCREENS.

OBSCURE GLASS

Obscure glass is a textured glass that is used for light diffusion or decorative effects. It is ideal for rooms requiring privacy where you would like to provide sufficient light along with visual elegance. We have many patterns to choose from.

COLOUR FINISHES

Come in and check out our paint options to add some colour to your home. We offer a wide range of colours in matte or semi-gloss finishes, as well as wood grain and custom finishes.

DECORATIVE GRIDS

Grids, also known as muntin bar, are the strips of materials within the glass, designed to add character to your home. We offer a variety of styles and colours.

CUSTOM SHAPES

Rakes or double rakes, round tops, arches, bays or bows. Since 1977, we have designed and built a great collection of shapes and sizes. Bring us your plans and let's work together on some ideas.

THERMOPROOF PATIO DOORS

A patio door offers an increased feeling of space and the opportunity to take advantage of your surroundings. With a variety of sizes and options available, the Thermoproof patio door design combines strength and efficiency to provide you with one of the best features of your home. We only use North American-made hardware, including ergonomic handles, extra security locks, and two sets of dual brass wheels that allow the door to move with less effort.

Clear patio door

Three panel patio door, available in 9' and 12' sizes

Our Patio doors are equipped with attractive ergonomic handles and a secure dual pin foot lock.

BUILDING CODE REQUIREMENTS

The British Columbia Building Code includes requirements that are specific to the structural performance of windows and patio doors. There are also requirements regarding thermal performance based on the geographic location of your home.

The North American Fenestration Standards (NAFS) outline the structural performance required for any arrangement of windows, patio doors, skylights, or exterior doors for your home. Different geographic areas will require different NAFS ratings and each window requires a sticker outlining the test results for your product.

At Thermoproof, we design and build your windows with these requirements in mind. Our products consistently exceed structural and energy provision requirements and offer industry-leading water penetration levels.

Please note: It's important that you discuss current building code requirements with your building official and contractor.

REPLACEMENT WINDOWS

Replacing those old sweaty windows with new Thermoproof Energy star windows doesn't have to be a hassle. You have options. With our Renovation frame you can simply install our window over your existing window. Caulking it on the exterior and interior of your home will put an end to cold aluminum frames. You can also completely remove your existing window and use our New Construction window. You can install your new window over your interior window liners, or replace them at the same time. Either way you end up with warmer winters and cooler summers.

FAQS

What does “Built for Life on the Island” mean?

Because we live here, we know that it can get quite hot here in the summer, and that winters are usually damp and rainy. Most of you probably live within a few kilometers of the ocean, and your windows and patio doors are going to be exposed to sun, rain and salt air throughout their lifetime. Thermoproof products are specifically designed and built to protect your home from these lovely but sometimes harsh realities of Island life.

How do I choose between Nail-On and Renovation windows?

Nail-On are the first choice for new construction but also used in some renovations. For example, if you were removing your windows and siding to replace both, then Nail-On would be a good choice. Renovation windows are a good choice if you have aluminum windows that could be difficult to remove. Our dealers are able to replace your old windows and install new windows using a variety of applications.

Sliders, Casement, Awnings, Picture Windows— Which One is Best for Me?

Each of these window types has its own design characteristics. Many homes use a mix, and every home is different. Are you trying to make the most of a spectacular view? Is space limited? Do you have young children? Our approved dealers can help you choose the windows that are right for you.

How much maintenance am I in for?

Fortunately, Thermoproof windows and patio doors are very low maintenance by design. You won't need to do any more than regular cleaning (warm water, mild detergent and a clean cloth).
